Digital Literacy Project Report

Course Code: CSE0001
Course Title: Digital Literacy

Name: Aditya Raman
Registration Number: 25BCE10048
Branch: B.Tech (Computer Science Core)
Year: 1st Year

Institution: VIT Bhopal University
Date: 31 March, 2026

Introduction

This project is based on the concept of digital literacy and its importance in today's world. This project, as a Student Digital Ambassador, aims to understand and apply the necessary digital literacy skills to enhance my growth. This project has five tasks: to create an infographic, to create a digital portfolio, to explore coding and collaboration platforms, to understand email etiquette, and to understand cyber crime awareness.

I learned many practical aspects about various digital tools and platforms through this project. This project also helped me to understand how to behave online in a responsible and professional manner. This project has given me a good foundation to use technology in a safe, productive, and professional way.

Task 1 : Digital Literacy Infographics

I designed an infographic about digital literacy awareness using Canva. In the infographic, I included information about digital literacy, safe internet usage, digital tools that can be helpful to students, and having a professional online presence. I tried to keep the infographic simple, visually appealing, and easy to understand for students.

The infographic includes information about digital literacy, its importance, what digital literacy means, internet safety, digital tools, and having a professional online presence. In addition, it offers some information about internet safety. While creating the infographic, it was interesting to see the different design templates offered by Canva. It was slightly challenging to arrange all the information on a single page without making it look crowded. This assignment helped me enhance my creativity.

Task 2 : Digital Portfolio

I have developed and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms have different uses in establishing a professional online identity.

GitHub is primarily used to display projects and programming skills, which will be helpful in establishing a good portfolio in the future. LinkedIn is a professional networking site where I can get connected to various professionals in the field and look out for possible job prospects. Kaggle is helpful in learning data science.

From this task, I have learned the significance of having a professional online identity. I plan to update my GitHub account regularly with projects, stay active on LinkedIn, and make the best use of Kaggle in the next four years. This will be helpful in the future in finding internships and placements.

Task 3 : Coding and Collaboration platform

I tried out coding and collaboration tools. For coding, I used HackerRank for practice and completed a basic-level problem. This helped me learn basic programming concepts and enhance my logical thinking abilities.

For collaboration, I designed a quiz using Google Forms. The quiz has five questions related to digital literacy, and they are a combination of multiple-choice and short-answer questions. It also has Google Sheets integration for response collection and analysis.

Overall, this task has helped me learn how these tools can be applied in the academic field. HackerRank will be helpful for practicing coding, and Google Forms will be useful for creating quizzes, surveys, and collecting data. This task has enhanced my knowledge of digital tools.

Task 4 : Email Etiquette and Social Media

In digital communication, if proper etiquette is not followed in emails, it may result in confusion and may also create a bad impression. For example, if an email is sent without a subject line or if informal language is used in an email to a professor, it may not be taken in a good light.

This kind of situation may be avoided if proper etiquette is followed in sending emails. This includes the subject line of the email, proper language, and a proper structure.

This task has helped me understand that proper communication is necessary in academic and professional fields. This is because even a small mistake in an email may have serious consequences.

Task 5 : Ransomware

While conducting research on ransomware, I was surprised to see how rapidly it could spread and cause damage on a larger scale, as seen in real-world cases. This is because many people become victims due to their lack of knowledge about basic security practices.

This task has taught me how important it is to be cautious while using the internet. One thing I am going to change is that I will not download anything from unknown sources and will update my system regularly. Also, I will make sure that I regularly back up my data.

This task has increased my awareness about cyber threats and taught me that many problems can be avoided in simple ways.

Conclusion

This project has helped me understand the significance of digital literacy in today's world. I have learned how to make the best use of different digital tools, create a professional online presence, and also understand effective communication.

I have also become aware of the safety and security of the internet and different cyber threats.

I have learned something new from all the tasks, and it will be helpful to me in the future. Every activity has been helpful in my learning process.

This project has helped me become efficient in using technology in the future.
